

INHALANTS

Street names: whippets, poppers, snappers, air blast, thrust, huff, laughing gas

What are the risks?

Inhalants are common household, industrial and medical products that produce vapors, which some people inhale (breathe in) to make them feel intoxicated or "high." - www.druginfo.org

Inhalants affect the brain with great speed and force and keep oxygen from reaching the lungs. Perhaps the most significant toxic effect of chronic exposure to inhalants is widespread and long-lasting damage to the brain and other parts of the nervous system. - www.drugabuse.gov
